

Dirty Electricity Stetzerizer Filters Now Available For Purchase in the United Kingdom

By GS Filters BV

Dated: Jul 17, 2009

GS Filters BV announces the UK solution for EMF radiation (also called electrical pollution or dirty electricity). People with electro-hypersensitivity no longer have to suffer with the arrival of the UK Stetzerizer Filters at www.stetzerizer.eu.

The Stetzerizer Filters are only available from GS Filters BV and are the only product of its type in the world repeatedly and independently scientifically tested and proven to reduce 'dirty electricity' from electrical wiring in homes, schools and offices. The Stetzerizer Filters (<http://www.stetzerizer.eu/en/products.php>) have demonstrated effectiveness in reducing symptoms associated with electrical hypersensitivity, assist diabetics regulate blood sugar levels and reduce symptoms of multiple sclerosis (<http://www.stetzerizer.eu/en/health.php>).

According to Canadian researcher Dr. Magda Havas from Trent University, "as much as 50% of the population may be electrically hypersensitive". People who are electrically hypersensitive may experience a wide range of symptoms including asthma, headaches, chronic fatigue, depression, body aches, memory loss, insomnia, anxiety and a host of other health concerns.

Dr. Robert C. Kane, Ph.D. states, "It is generally accepted in the scientific community that radiofrequency radiation is a biologically active substance. It is also readily acknowledged that human exposures to radiofrequency radiation have become pervasive during the past twenty years, whereas such exposures were uncommon prior to that time. It is suggested that fetal or neo-natal exposures to radiofrequency radiation may be associated with an increased incidence of autism."

The Filters have proven beneficial in reducing dirty electricity from electrical wiring found in homes, schools and offices in the US, Canada and Europe.

GS Filters BV, has been distributing the Filters in Europe since 2008 and now they are available for the United Kingdom style electrical plug. Managing Director of The Hague-based GS Filters BV, Antoon Moonen says he is, "pleased to launch today the new Stetzerizer Filters designed for UK power outlets and Stetzerizer Microsurge Meter to the UK market. We have already had very encouraging feedback from people using the Filters in Europe and touching stories where installation of the Filters has resulted in vastly improved health in both children and adults. In addition to the expected results, the majority of people also report sleeping deeper and longer, diabetes related eyesight problems have improved and the symptoms associated with autism in one four year old boy have dramatically improved, he even cuddles now – much to the excitement and relief of his parents".

Designed simply to plug into electrical outlets or power strips, Stetzerizer Filters effectively reduce high frequency pollutants from electrical wiring. The accompanying Stetzerizer Microsurge Meter allows the user to measure the amount of dirty electricity on electrical wiring as well as to monitor the effectiveness of the filter installation.

According to research carried out by Dr. Magda Havas, in schools with 'sick building syndrome' where Stetzerizer Filters were installed, both staff and students reported improved health and more energy. "The number of students needing inhalers for asthma was reduced in one school and, in another, student behavior associated with ADD/ADHD improved," she says.

In relation to other illnesses, Dr. Havas reports that “blood sugar levels for some diabetics respond to the amount of dirty electricity in their environment. Type 1 diabetics require less insulin and Type 2 diabetics have lower blood sugar levels in an electromagnetically clean environment. Individuals diagnosed with multiple sclerosis have better balance and fewer tremors. Those requiring a cane walked unassisted within a few days to weeks after Stetzerizer Filters were installed in their home”.

The Stetzerizer Filter is the only product of its type in the world scientifically tested and proven to reduce dirty electricity from electrical wiring. Designed and sold in the US and Canada for the last seven years, Stetzerizer Filters are CE certified, which means they meet the stringent standards of the EU for quality, dependability and safety.

The average UK home requires 15 filters that are easily installable and sold together with a Mircosurge Meter for €975. The box comes with a set of complete instructions and is accompanied with a 30 day no questions asked money back guarantee. Both products are available to UK customers at <http://shop.stetzerizer.eu/Products.aspx>.

###

The Hague-based GS Filters BV was established in 2008 with the primary purpose of importing and distributing STETZERiZER products throughout Europe, United Kingdom and Australasia. They are the sole European and UK distributor for STETZERiZER Filters (Graham-Stetzer Filters) - the worlds only proven filters for reducing electromagnetic radiation (dirty electricity) on building wiring and the STETZERiZER Microsurge Meters.
